WHY WIELTON?

ROBOTICS / AUTOMATION

Wielton Trailers production takes place within automated processes, where up to 70% of the tasks are performed by robots. This technology ensures consistent quality and allows achieving high factory efficiency.

KTL

To protect the trailer frames from corrosion, we use KTL technology, which stands for cathodic electrodeposition coating. The coating process, preventing rusting, takes place through submerging the frames in special tanks. As a result, the protective layer reaches even the most

WIELTON

Wielton is a Polish company with its heart located in Wieluń. For almost 30 years, we have been manufacturing vehicles supporting the transport industry. We are among the top three largest producers of trailers and semi-trailers in Europe and belong to the top ten global leaders in this field.
